---

**Mandatory Obligations**

| OHS Act 2004 Sections 27, 29—23 | OHS Regulation  
|----------------------------------|------------------|
| The full ACT can be viewed [here](#) | Designers Reg. 3.5.3 - 3.5.11  
|                                  | Manufacturers Reg. 3.5.12 - 3.5.14  
|                                  | Suppliers Reg. 3.5.15 - 3.5.21  
| The full Regulations can be viewed [here](#) | Members of the supply chain have a positive obligation to follow the hazard identification and risk assessment process and provide the resulting safety information to purchasers.  
|                                  | The Act & Regulations also contain details of specific hazard control measures required for certain types of plant (eg. ROPS on tractors). Refer Regs. 3.5.23 - 3.5.43 |

---

**Regulator Guidance Material**

- The Safety Regulator for each jurisdiction issues guidance material on specific safety issues.
- Guidance materials are designed to elaborate on HOW to satisfy the obligations set down by the legislation. Guidance covers a very broad variety of topics such as excavation work, hazard identification & risk assessment, various specific plant & equipment issues etc.
- [A catalogue of Victorian compliance codes are available](#).
- [WorkSafe Victoria has been a prolific issuer of guidance material, a catalogue of which is available](#).

---

**Industry Knowledge**

- There is an underlying requirement in the WHS legislation that duty holders must be conscious of the existence and further development of "industry knowledge" relating to management of safety hazards and risks.
- The most well-known examples of industry knowledge are Australian and International Standards; however industry knowledge can be contained in a multitude of medium, including for example industry association publications.

---

**Plant Assessor**

- This is probably the most difficult information for duty holders to keep abreast of. Examples of some highly important Australian Standards relating to plant include:
  - AS 4024 (series) – Safety of machinery
  - AS 1418 (series) – Cranes, hoists and winches
  - AS 2550 (series) – Cranes, hoists and winches – safe use
  - AS 2294 (series) - Earth-moving machinery - Protective structures
  - AS/NZS 2153 (series) – Tractors and Agricultural Machinery
  - AS 1657 – Fixed platforms, walkways, stairways & ladders – design & construction
  - AS/NZS 1200 (series) – Pressure Equipment
- Plant Assessor condenses all of the relevant requirements of standards and applies them against specific plant types in the context of a plant hazard assessment.
